

## 13 Reasons to clean your water

1. - There are 35,000 registered pesticides containing 600 chemical compounds. Yet municipal water systems are only required to test for six (6). Many of these chemicals are known to cause birth defects, nerve damage, sterility and cancer. (ABC News).
2. - The World Health organization estimates 75% to 80% of cancer may originate in our water and environment. (Forever Living).
3. - The General Accounting Office reports that 20% of the nations 65,000 community systems are unable to meet minimum standards set by the Safe Drinking Water Act. (Readers Digest).
4. - A recent government study found that more than 25% of all large U.S. public water systems contain traces of one or more toxic substancespublic water systems do not test for the carcinogens and other dangerous chemicals that are being found. (Wall Street Journal).
5. -One federal study found 87% of the conventional sewage plants discharging excess pollutants. Even when the plants work well, they cant remove much nitrate, heavy metals or pesticides. (Prevention Magazine).
6. - In 1982 alone, there were 70,000 violations of drinking waterstandards by municipal water systems. And how many more have we had since then? (Readers Digest).
7. - EPA revealed that dangerous chemicals are leaking out of as many as 16,000 landfills throughout the U.S., percolation down through layers of soil into the vast underground water reservoirs called aquifers. (Discover Magazine).
8. - Trihalomethanes are created when chlorine reacts with decaying organic matter in the water. This group of four organic halides contaminates 90% of this countrys drinking water. All four compounds including chloroform, were banned as an anesthetic in 1976 are either known or suspected of causing cancer. (Consumer Report).
9. - Today a new specter looms over our reservoirs: cancer. Theres considerable speculation that the rise in cancer deaths, now 20% for the nation as a whole, many be due in part to the pesticides, fertilizers and industrial wastes that increasingly find their way into our water supplies. (Readers Digest).
10. - Despite improvements in both public and private water treatment practices, there are still harmful chemicals in 90% of the water we consume. (New Shelter Magazine)
11. -1,268,000 new cancer cases will be diagnosed this year in the U.S. (July 12, 2002 American Cancer Society).
12. - Your skin is your bodys largest organ it absorbs most everything. Your body can accumulate, through skin absorption, more cancer causing agents and other contaminates during 24 normal showers or baths than it could get from the amount of water you drink over a 5-year period. (AMA)
13. - Johann Grander (Scientist) wrote: "Water that has been revitalized through magnetic treatment is restored to its natural energy".

Sick water negatively affects the health of people, animals and plants. On the other hand, water that has been revitalized through magnetic treatment is restored to its natural energy.
